

Why FQHCs Love Apteryx Cloud Imaging

Learn why Federally Qualified Health Centers all over the country are switching to Apteryx Imaging. **Reimagine dental imaging with software that scales with your practice.**

Device Agnostic

Apteryx Imaging works with most sensors and practice management solutions on the market, making it easy for your team to choose what works for your office.

Access Anytime, Anywhere

Quickly access X-rays and images remotely, via the cloud, to better support patient care, like having the images up and ready at each office without the need for the front office to download and send the images via email to the other office.

Cost Savings

Reduce your reliance on onsite servers and maintenance with offsite, automatic data backup and hosting with Microsoft Azure.

“**The biggest advantage is if you have multiple office locations.** Everyone has access to everything and a lot of time is saved by not having to open and close servers based off of location.”

DR. AMY WEBB
